

Standard Hem

Fabrication standard finish for all banners; included in pricing.

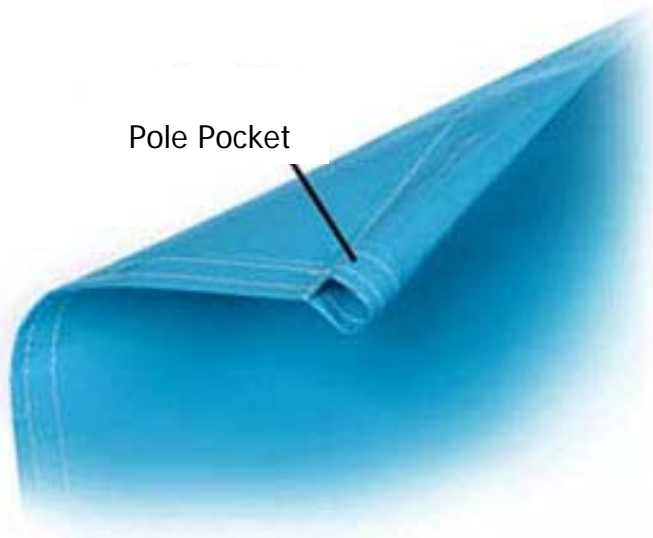

Hem with grommets every 2-3 feet across top and bottom unless otherwise requested in "Special Instructions" section.

Pole pockets

We sew a 3" open hem along the top and bottom or left and right edges. A wooden dowel or a piece of PVC pipe can slide through the pole pocket for a quick and easy installation. Holds the banner taut.

For special requests on pole pocket sizing, please indicate your needs in the "Special Instructions" section on the order page.

Nylon Webbing and "O" Rings

The most popular finishing method for outdoor banners; most banners fail from the elements at the corners where the grommets are located. Our solution: We sew nylon webbing (seatbelt type material) in the hem with "O" rings attached on all four corners. Comes with or without grommets along the top and bottom; please make a notation in the "Special Instructions" section on the order page.
